The library transitioned from using Web Management to the Decision Center as its data tool. The Three Year Comparison data is from the Decision Center which is based on checkouts. While the total number of lent and borrowed items is the same in both systems, the breakdown of items is different in some cases, from previous years.

*Regular Search #s are not dependable due to the crossover searching when people search a collection of databases rather than one database. Other collections do not seem to have the same problem. Therefore, the "Regular Searches" category for all should not be used for formal comparison.
