Definitions

Title Searches: These search types match the drop down menu in the Serials Solutions title search form.

Browse by Alphabet: This search type gets counted when your patrons use the browseable A-to-Z links in the E-Journal Portal.

MARC Record Searches: MARC record clients using the hosted 856 option can track the number of times a patron clicked through to the holdings lookup from the MARC record in your OPAC.

OpenURL Searches: For Article Linker clients, most of these searches will be from use of that product. All other clients will show numbers here from Journal Linker searches if OpenURL capability has been enabled with your content providers. (See the Journal Linker installation page for more details.) We don't currently have a way of separating Journal Linker searches from Article Linker.
